

Heat exchangers

HBE heat exchangers are appropriate for a high heat dissipation of up to 1,000 kW. In doing so, they work with reduced noise and are especially pressure resistant. The heat exchangers are available as [oil-/water cooler](#), [oil-/air cooler](#) and as [bellhousing cooler](#). HBE also offers a [brazed plate heat exchanger](#) (DOC®), which forms a heating surface by combining stainless steel plates via a copper solder.

More information and technical details on heat exchangers can be found in our [product catalogues](#).
